

BizOS: Service Catalog

Introduction to BizOS: DR Cloud Platform

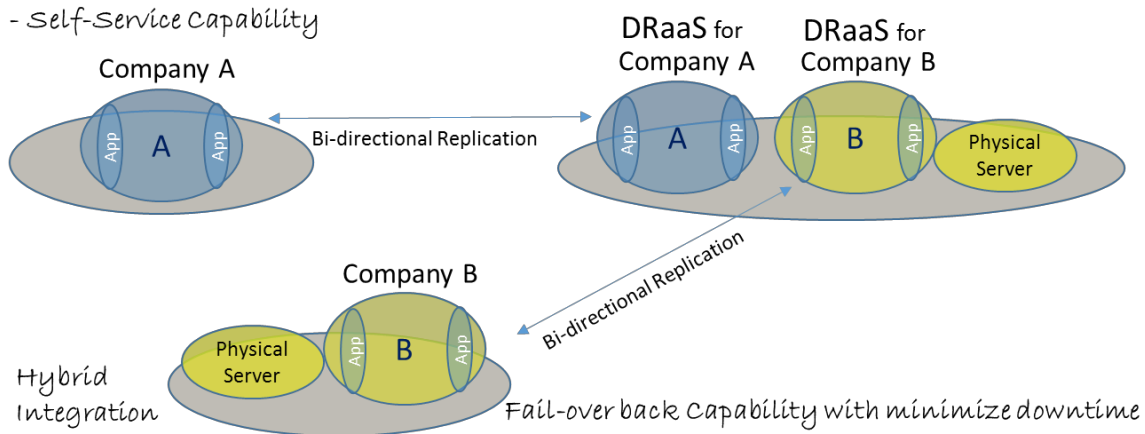

SIG-BCS* have a vision straight forward to provide a “Best of choice Disaster Recovery Cloud Platform” solution to support the enterprise business while disaster occur. As the IT technology have changing and evolving to a third (3rd) platform which have past the first and second platform already. The 3rd platform is something about Cloud, Big Data, Social and Mobile. Cloud computing has more becoming a key technology for the enterprise business. Most of all critical business application a day have running on Cloud. By utilize virtualization technology for Compute, Network and Storage resource.

BizOS-DR Cloud Platform is a new service from SIG-BCS that comprise of a group of hardware and software component which virtualization technology to deliver new modern way to manage your Disaster Recovery Plan (DRP). The goal of DR Cloud Platform is to serve modern IT organization who are shift more focusing business outcome than complex of IT infrastructure. By adopt the DR Cloud Platform as a service for their IT’s DRP.

Simplify SLA Management

- Hot, Warm & Cold
- Self-Service Capability

BizOS-DR Cloud Platform

BizOS-DR cloud Platform utilize SIG-BCS IT infrastructure to drive substantial results in cost savings and management flexibility. It allows you to dynamically increase or decrease your capacity on demand within days instead of weeks or month.

Whether it makes more sense for you to leverage the foundation of your own data center and network; via the BizOS-Managed Solution as a Service with a secured connection; or a hybrid integration of you own data center and BizOS-DR Cloud Platform. We can help you decide which strategy is best for your particular IT infrastructure.

** SIG stand for Solution Integration Group who is a group from Metro Systems Corporation Public Company Limited to deliver an IT business software solution and service.*

** BCS stand for Business Continuity Service who is one business unit in SIG group. To delivery any kinds of IT solution and service for a Disaster and Recovery purpose some time we call “Business High Availability Solution Service”*

BizOS: DRaaS (Simplify Deployment)

Simplify deployment within 5-15 Days

BizOS-DRaaS can quickly and simple deployment with your IT infrastructure within 5-15 days. With the core Virtualization Copy Data Management that provide by Actifio. Actifio copy data management solution consists of a single, application-centric, SLA-driven solution for data protection, disaster recovery, business continuity, test & development, compliance and analytics for virtual, physical or cloud IT infrastructure.

Actifio copy data management delivers the unique capability to enable applications to directly use point-in-time data without the need for a traditional “restore” operation. This is because Actifio is an intelligent storage subsystem that can instantly create a “view” of the application data from a past point in time, and allow applications to access it efficiently via Fibre Channel or iSCSI, just as if accessing a traditional storage system.

This unique technique of enabling applications to directly access historical data eliminates the traditional “restore” time and data movement and significantly increases application availability at much lower cost. Any application consistent data point stored in the system can be accessed on any system connected to the Actifio. Common use cases are to recover a VM after a software issue, to retrieve a file that was deleted accidentally, or to use a virtual copy of a production data set for test and development.
