

MSC SSE Managed Services

Service Package min. 120,000THB / Year
Exc. Vat 7%

Leaving the IT management to experts who ensure the technology runs efficiently and securely. Replace perimeter VPNs with context-aware, app-level access and micro-segmentation to minimize blast radius across DC, cloud, and OT/IoT.

Customer Benefits

Cost-Effective

Reduces the employment of IT staff and offer predictable monthly expenses.

Proactive Support

Helps prevent issues before they disrupt business operations.

Expertise

Access to specialized IT knowledge and tools without needing to hire specialists.

Flexibility and Scalability

The ability to scale services according to the business needs flexibly.

What is Cisco SSE?

Cisco SSE (Secure Software-Defined Edge) is a security framework that combines various security services to protect users, applications, and data across a distributed network. Here's a breakdown of its key components and benefits

Why Cisco SSE?

Enhanced Security Posture:

Provides a comprehensive security framework that addresses modern cyber threats across various environments.

Improved User Experience:

Ensures secure, seamless access to applications for users, regardless of their location or device.

Scalability:

Cloud-based services enable organizations to scale their security solutions easily as their needs grow.

Simplified Management:

Centralized management tools streamline security operations, making it easier for IT teams to monitor and respond to threats.

Compliance Support:

Helps organizations meet regulatory compliance requirements by protecting sensitive data and providing audit trails

Key Components of Cisco SSE

Secure Access
Service Edge
(SASE)

Cloud Security

Zero Trust
Security

Data Loss
Prevention (DLP)

Threat
Intelligence

Cisco SSE is designed to address the challenges of securing modern, distributed networks, particularly in environments where users access applications from various locations and devices. By leveraging cloud-based services and a Zero Trust approach, it provides robust security while maintaining a positive user experience.
